

living surface

Interactive floors and walls

So you want to feel alive...?

Our 'living surfaces' are interactive playgrounds with truly vivid components that you can touch or play with. Whether they are on the floor, table, wall or ceiling, our digital living creatures swim, hop or fly and react to every movement of the person involved.

living pool -

Interactive pool with fish or other sea creatures

Our digital fish live in a virtual pool which can easily be projected onto a suitable floor surface. When you walk into the pool, the movement of your shadow causes the fish to react, and you can play with them.

The water reacts, too, creating waves with realistic lighting effects. Correlating sound effects complete the illusion that you are walking through a real water-filled pool.

You can put together your own very individual virtual aquarium from an existing stock of fish, and we can also integrate your own personal favourite!

living flowers -

Interactive flowers

The living flowers can be swept to one side when you walk on or touch the play area, revealing the view of the design beneath them. Some of the flowers have faces, they can blink their eyes, whisper and giggle when they are swept to one side.

The number and size of the flowers are variable. Your own images can be integrated via a USB-Stick. The flowers can of course be replaced by other motives of your choice, for example leaves, stars etc.

living poster -

Interactive poster designs

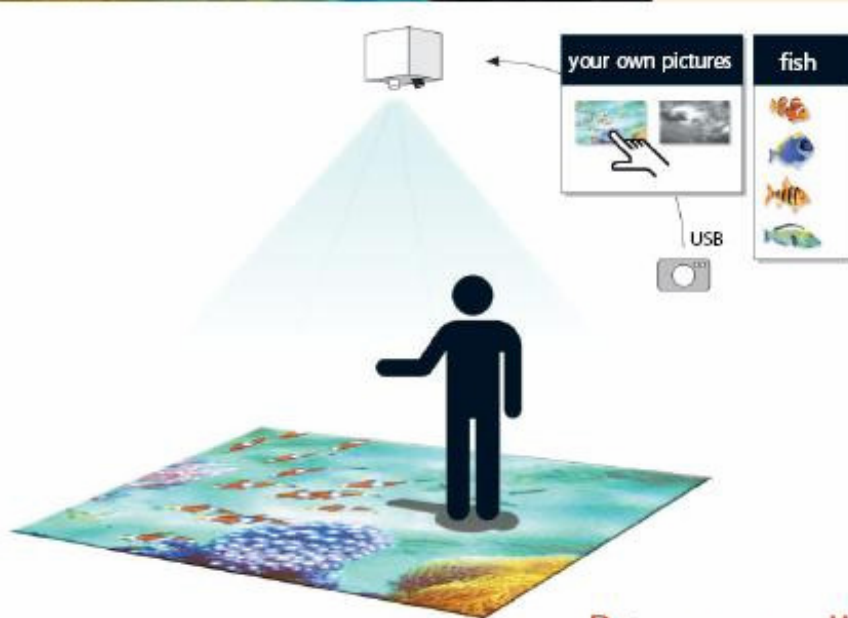

With this particular masking effect, the overlying image disappears in a sea of flames as soon as you step onto the surface. Underneath lies a second image which then becomes visible. Both images can be varied according to personal wishes.

living footprints -

Interactive traces

When you walk on this particular area, you leave traces in the sand in the form of footprints, glittery stars or rose petals. Not only the background design but also the number, size and type of 'magical traces' are variable.

Bring your wall
and floor surfaces to life!

And it's as easy as this...

Each interactive experience is produced by projection onto a suitable surface of your choice (table, wall, floor etc) and the recognition of a person's shadow on the play area with the aid of a small observation camera.

The highlights at a glance...

- Fantastically realistic photography thanks to the most modern 3D graphic technology
- Individual creativity made possible through the inclusion of your own photos
- Automatic interchangeable designs and special effects according to your individual 'script'
- Upgrade option for upcoming new effects and games using the same technology
- Use as an interactive advertising medium and for the development of customized effects designed especially for you or your company

Areas of application:

- Entertainment for kids, amusement parks and private rooms
- Showrooms, foyers, museums, galleries, facades
- Trade fairs, exhibitions and events
- Interactive advertising in public areas
- Lounges, bars and clubs
